I would like to have a blood test by which the level of Prostate Specific Antigen (PSA) and any other markers may be measured. I understand that this could give a doctor some indication of any abnormality within my prostate gland but that I may also need a simple clinical examination carried out by my doctor. I understand that I will be notified of the result and advised of any further action that may need to be taken. I understand that very occasionally the result could be normal even if my Prostate gland is abnormal and that if I have trouble passing urine I should still arrange to see my doctor.
